

# Angels' Eyes Tear Stain Preventer

Angels' Eyes® is the first supplement specifically developed to eliminate unsightly tear stains from the inside out. It also helps to eliminate staining around the mouth and staining on coats that is due to licking. Angels' Eyes starts working before the stains begin and never adds food dyes or wheat which can have negative effects on your pet. All ingredients are products of the USA.

## Angels' Eyes

This unique food supplement helps prevent stains around pets' eyes and mouths. Just sprinkle Angels' Eyes daily on regular food. After 3 months, reduce it to 4 times a week. After 6 months, reduce it further to twice a week.

As the stained areas are trimmed, the newly grown coat will be totally clear. The growth pattern of the pet's coat will determine when it will be completely tear stain free. Most coats clear in anywhere from 3 to 5 weeks.

Angels' Eyes® is very palatable but in rare cases they may not like changes to their food and not eat enough. If this happens you can put Angels' Eyes in their water. When mixing, add the water to Angels' Eyes® ... Do not pour the powder into the water. Ingredients: 100% pure beef liver, tylosin as tartrate

**FROM THE MAKERS OF ANGELS'S EYES:** "Many people wonder why some dogs and cats eyes water, which causes a stain on the fur just below their eyes. This condition is called epiphora. When the facial hair is wet from excess tearing it is the breeding ground for bacteria and yeast. Not only is it unsightly but may be very irritating to your pet. The staining may also emit a moderate to noticeably strong odor.

"Up until now these reddish brown stains due to tear pigments were hard to eliminate completely. Tear-staining can be traced to health and diet, as well as genetics. Here are some helpful tips to improve your pets well being:

*"Keep your Pet Healthy:* Have your pet checked at least twice a year by your veterinarian for ear infections and ear mites, gum infections, common yeast or bacterial infections of the eye (especially Red Yeast) and for clogged tear ducts.

*"Check Your Pet's Diet:* Artificial food colorings (dyes), artificial food additives and preservatives, cereals such as wheat can cause allergies in cats and dogs. These allergies can cause tear stains. Also check for face rubbing, licking of front paws, head shaking, and ear inflammations these are other signs of allergies. Water minerals can also add to tear staining. Use bottled or filtered water in a stainless steel bowl.

*"Keep Your Pet's Eyes Clean:* Hair in the eyes can cause infections and irritation. Eyelashes can grow at abnormal angles and rub on the eye. Check your pet's eyes regularly. Also check for collected dust, stray hairs, and dried tears. Any foreign matter in the eye is likely to lead to tear stains.

*Hygiene:* Keep your pet's eyes clean. Always wash your hands first before touching the area around their eyes. Wash your pet frequently. Always make sure you comb them first before washing to remove any knots or matt's. Keep the shampoo out of their eyes to avoid irritation. "
